

1. Print at 100% — actual size, no “fit to page”. One side only.
2. Cut around the outside line; it is all one piece. Cut the marked slit in the red half with a craft knife, not scissors.
3. Score the two dashed lines. Both folds go BEHIND: white half first, then the red half back over it.
4. Push the paper disc through the slit. It pops through, lies flat inside its ring and holds the back shut. Pop it out again to open.

The ball is on the front, and the two halves make it again on the back. Inside is left blank for you.
